

Week 6: <https://openprocessing.org/sketch/2665003>

I am proud of this project because it took the flashing lines that I was already proud of, and spun them. I felt very confident in my coding abilities when creating this.

Week 3: <https://openprocessing.org/sketch/2648344>

I think this piece is cool because both the background and the lines are the same blues flashing. I created this with a for loop, which had the rings permeating out from the center of the workspace

Week 5: <https://openprocessing.org/sketch/2659120>

Im submitting this piece because I think its really pretty, and I found it really challenging. I used noise and a few let(rgb), to create the colour changing trail. I did a lot of research and had to look up quite a few things to make this work, but it turned out just the way I wanted.
